

DataDivider ZZ Servers Management Exceeds PCI Standards

DataDivider is a software as a service (SaaS) suite of applications that allow organizations who store, process or transmit cardholder information to de-scope internal functions and securely contain personal data within a hosted portal. DataDivider sits between the consumer, the merchant system and the payment gateway enabling PCI-compliance by ensuring that cardholder data cannot enter an organization's corporate network. This solution can enable merchants to reduce or eliminate their PCI footprint with virtually no impact on existing systems and processes.

Proactive Compliance with ZZ Servers

"The ZZ Servers team is an extremely talented and helpful partner responsible for the overall compliance and management of the DataDivider infrastructure and controls. Their entire environment was purpose built for PCI. Controls were not 'add-ons' or after thoughts, they were very carefully planned to completely support each control that they manage. Finally, each contract contains a very granular breakdown of responsibilities and customers are required to follow detailed change control processes for every change or update that they would like to make."

"In my search for a truly compliant hosting provider, I came across many providers claiming to be compliant who were unable to stand up to the scrutiny. Many of these providers were unable to demonstrate even a basic understanding of PCI controls. Few were willing to share evidence or allow a QSA to make an onsite visit. Many had no standard contract language and none of them were able to provide a complete breakdown of responsibility for controls and if there was shared responsibility. Many service providers were also very costly as our requirements were viewed too 'custom' and therefore were not included within the baseline PCI package. ZZ Servers met and exceeded our requirements."

Enterprise Compliance

Over the years, the DataDivider team has come to rely on ZZ Servers for its professionalism and expertise. ZZ Servers' team of compliance specialists and infrastructure engineers coordinates and manages the DataDivider environment according to stringent PCI and industry standards.

DataDivider is designed to mitigate compliance risks by ensuring that cardholder data never enters the merchant environment, and as such is a compensating control for many or all of the controls that a merchant would otherwise have to implement. DataDivider enables organizations of any size to leverage the cost and flexibility of the cloud while having the assurance that their data is completely safe.

Founded in 2004, DataDivider is headquartered in San Jose, California. For more information please visit www.DataDivider.com or contact sales@DataDivider.com

Stable and Secure with ZZ Servers

DataDivider's experience with ZZ Servers is typical of numerous SMBs that now run smarter and faster. With ZZ Servers, businesses like DataDivider are able to rely on qualified experts allowing them to find customers and grow their business. ZZ Servers helps them do it.
